

Intelligent Fire Rated Technology

## The Fire Rated Downlight Evolution

featuring 'cool cage' design  
with freedom of lamp choice

14W GU10 CFL

[www.iCage.co.uk](http://www.iCage.co.uk)

iCage is a trademark of  Ansell  
LIGHTING

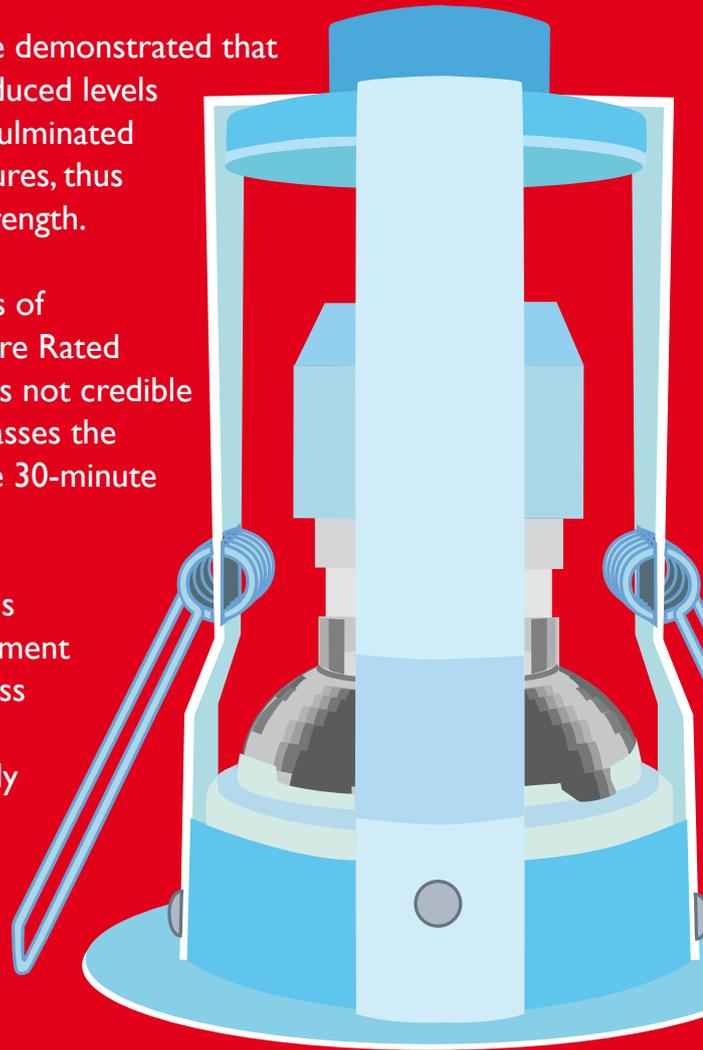

# iCage - Breakthrough

**iCage is a unique ‘cool cage’ design that allows freedom of lamp choice to the installer and end user compared to traditional ‘can’ type fire rated downlights.**

During extensive fire testing iCage demonstrated that the cage construction radiated reduced levels of heat into the ceiling void. This culminated in significant lower joist temperatures, thus maintaining their durability and strength.

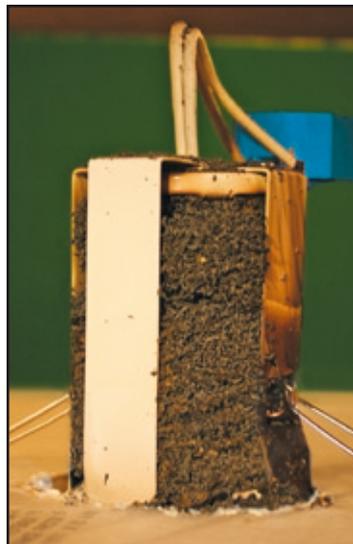

With the construction differentials of each ceiling, it is imperative that Fire Rated Downlights pass all three tests. It is not credible to assume that because a fitting passes the 90-minute test, that it will pass the 30-minute and 60-minute tests.

With the complexity of the various applications and statutory enforcement of Part B, it can be difficult to assess the needs of an installation. iCage takes away this problem as it is fully tested in 30, 60 and 90 minute ceilings and can be specified for all applications.

# innovative

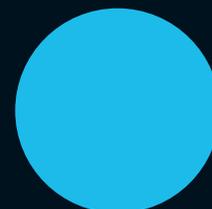

## INTUMESCENT ACTION

This patented and registered design, incorporates a unique intumescent reaction allowing a totally new concept as a cage constructed luminaire.

In comparison to existing fire rated enclosed can designs, iCage and its components operate in a cooler environment and are not reliant on forward heat lamps to provide lower operating temperatures.

iCage offers the installer and specifier a wide range of lamp options, including Part L compliant fluorescent up to 14W and 7W LED, as well as the traditional halogen lamp options.

# You can trust iCage

## Part B – Fire Safety (30, 60 and 90 minute ceilings)

Part B of the Building Regulations has been a legal requirement since 1987. The scope of the current regulation, published in 2000, requires that the building structure should provide adequate resistance to fire so as to aid the escape of personnel.

The categories of resistance to fire are split into three defined and structurally different ceiling sections

The ceiling is constructed with ceiling joists at 600mm spacings and a single layer of 12.5mm plasterboard fixed to the underside of the joist.

The ceiling is constructed with ceiling joists at 600mm spacings and a dual layer of 15mm plasterboard fixed to the underside of the joist.

The ceiling is constructed with ceiling joists at 450mm spacings and a dual layer of 15mm plasterboard fixed to the underside of the joist.

**ALL iCage downlights have passed this rigorous testing**

## Part C - Moisture Protection

It is important to limit the amount of moisture that is allowed to pass into a potentially cold ceiling void or roof space as current modern building methods can negate the need for ventilated spaces.

Under the requirements of Part C every effort should be made to prevent moisture entering the cold roof space from habited areas. It is therefore a requirement for any equipment installed into a ceiling, to restrict the passage of moisture laden air into the cold roof void.

For Part C compliance, air at a rate not greater than 0.06m<sup>3</sup>/hr/m<sup>2</sup>, is permitted to pass through the fitting at an air pressure of 2 Pascal's.

Part C has been a basic requirement for all new buildings constructed 1st July 2005.

**All iCage standard and IP65 downlights have passed this rigorous testing.**

## Part E - Acoustic (Resistance to Passage of Sound)

The intrusion of sound and noise pollution can have an impact upon health. It is therefore important to limit sound intrusion from adjacent rooms.

All iCage standard and IP65 downlights have been designed to limit the passage of sound.

**All iCage standard and IP65 downlights have passed this rigorous testing.**

## Part L – Conservation of Fuel and Power

With the environment at the top of the global agenda, it is vital that energy efficient equipment is used. The current 2006 document details a requirement for one per four fixed lighting fittings to comply and also luminaires that only accept energy efficient lamps.

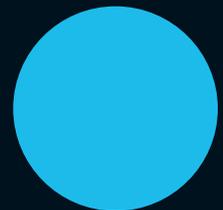

The iCage range includes dedicated energy saving versions, offering CFL and LED options.

LIA refers to new dwellings, whilst LIB is for existing properties

This logo indicates that the lamp to be used achieves a minimum of 40 lumens per watt and complies with the requirements of Part L of the Building Regulations.

Building regulations quoted apply to England and Wales. Variations may apply in other territories, please consult relevant local authorities in such cases.

# THE FIRE RATED DOWNLIGHT EVOLUTION

from Ansell Lighting

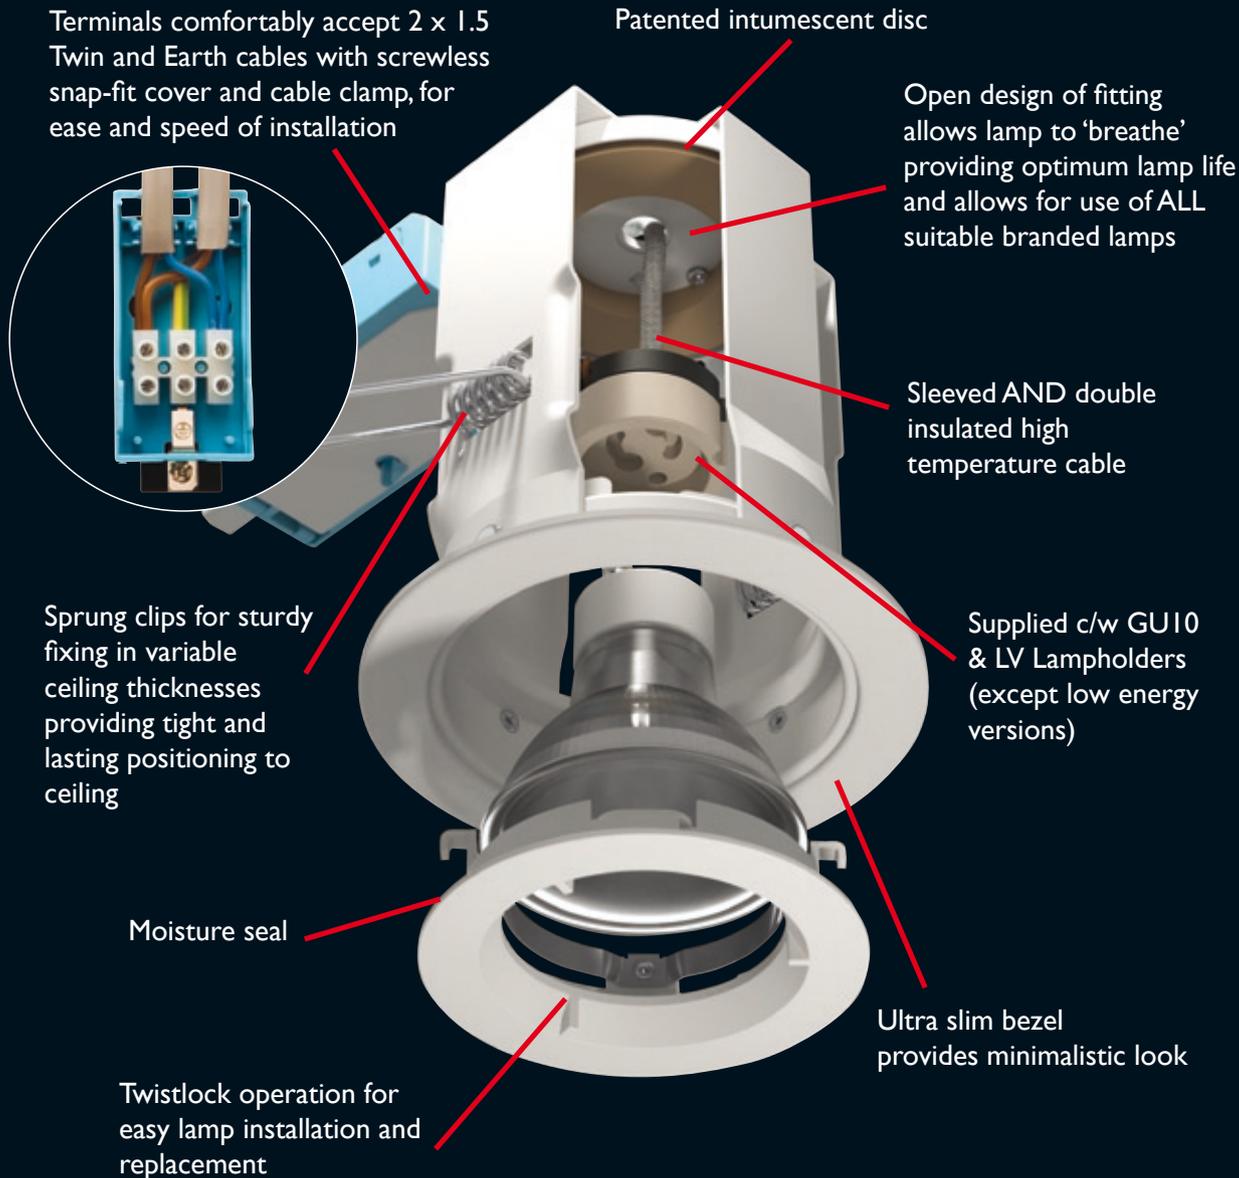

Intelligent Fire Rated Technology

- ingenious design
- intelligent thermal management for optimum lamp life
- innovative intumescent action
- independently tested to Building Regulations Parts B, C and E
- inclusive of GU10 and MR16 lampholders (apart from dedicated low energy models)
- integral Twistlock design for GU10, Low Voltage and all IP65 versions
- inconspicuous ultra-slim bezel
- Install both standard and gimbal version in 76mm cut out

Fully tested in 30, 60 and 90 minute ceilings

## iCage I3W GX53 Accessories

Comprehensive range of twist-on accessories for GX53 Downlight

### Trim Bezels

<b>AGMPL/TB/BR</b>	Brass Trim Bezel
<b>AGMPL/TB/CH</b>	Chrome Trim Bezel
<b>AGMPL/TB/SG</b>	Silver Grey Trim Bezel
<b>AGMPL/TB/SC</b>	Satin Chrome Trim Bezel

### Drop Glass 1 ( Clear outer ring with frosted centre disc )

<b>AGMPL/DG1/W</b>	Drop Glass 1, White Bezel
<b>AGMPL/DG1/BR</b>	Drop Glass 1, Brass Bezel
<b>AGMPL/DG1/CH</b>	Drop Glass 1, Chrome Bezel
<b>AGMPL/DG1/SC</b>	Drop Glass 1, Satin Chrome Bezel
<b>AGMPL/DG1/SG</b>	Drop Glass 1, Silver Grey Bezel

### Drop Glass 3 ( Frosted glass halo with open centre)

<b>AGMPL/DG3/W</b>	Drop Glass 3, White Bezel
<b>AGMPL/DG3/BR</b>	Drop Glass 3, Brass Bezel
<b>AGMPL/DG3/CH</b>	Drop Glass 3, Chrome Bezel
<b>AGMPL/DG3/SC</b>	Drop Glass 3, Satin Chrome Bezel
<b>AGMPL/DG3/SG</b>	Drop Glass 3, Silver Grey Bezel

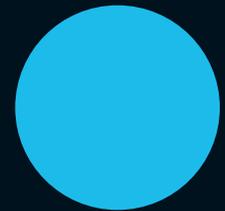

### Drop Glass Mesh ( Clear glass with decorative chrome mesh)

<b>AGMPL/MSH/W</b>	Drop Glass Mesh, White Bezel
<b>AGMPL/MSH/BR</b>	Drop Glass Mesh, Brass Bezel
<b>AGMPL/MSH/CH</b>	Drop Glass Mesh, Chrome Bezel
<b>AGMPL/MSH/SG</b>	Drop Glass Mesh, Silver Grey Bezel

### IP65 Protective Covers

<b>AGMPL/OPC</b>	IP65 Opal Polycarbonate Cover
<b>AGMPL/CPC</b>	IP65 Clear Polycarbonate Cover
<b>AGMPL/DCG</b>	IP65 Decorative Cone Glass

## iBox (Suitable for 400mm to 600mm Joist Spacings)

With building regulations requiring insulation to be run continuously in loft spaces, this can obscure the presence of a fitting below insulation.

iBox provides non load bearing mechanical protection against accidental damage which can be caused when loft spaces are used for storage. It also provides the fitting with additional ventilation further increasing lamp life as well as compliance with the requirements of good installation practice and building regulations.

iBox is supplied in a pre-fabricated flatpack format which can be quickly assembled without the use of any tools.

### Step 1 – Unpack and fold iBox, forming 2 ‘tunnels’

### Step 2 – Slide 1 tunnel in to the other, (iBox is adjustable to fit 400mm-600mm joist spacings)

### Step 3 – Place iBox over the icage downlight and secure

### Step 4 – Insulation material may now be placed over iBox

Note: iBox is not designed to provide a load bearing platform within a roof void.

Code	Description	Dimensions
<b>AIBOX</b>	iBox Insulation Protector	H: 220mm W: 196mm L: 400-600mm
